

BRD (Business Requirements Document) - Abridged

This document details the business needs that the system must fulfill.

Business Requirements Document: Inventory Management Module

1. Introduction:

This document defines the functional and non-functional requirements for the new Inventory Management Module. The scope is limited to the features required to manage the lifecycle of inventory from procurement to consumption.

2. Business Problem:

The lack of a centralized inventory system results in excessive manual work, financial leakage due to untracked variance, inability to manage vendors effectively, and a reactive approach to stock management.

3. Functional Requirements (FR):

ID	Requirement Statement
FR-INV-1.0	Item & Stock Management
FR-INV-1.1	The system shall allow administrators to define items with attributes such as SKU, unit of measure, and category.
FR-INV-1.2	The system shall allow setting of Min, Max, and Reorder stock levels for each item at each store location.
FR-INV-1.3	The system shall generate an automated reorder suggestion when an item's stock level falls at or below its reorder level.
FR-INV-2.0	Procurement Process
FR-INV-2.1	The system shall provide a four-step workflow: Purchase Requisition → Purchase Order → Goods Received Note → Invoice.
FR-INV-2.2	The system shall enforce a multi-level approval process for Purchase Orders based on configurable value thresholds.

FR-INV-2.3	The system shall flag any Purchase Order where the item price deviates from the last purchase price by more than a set percentage, requiring higher approval.
------------	--

FR-INV-3.0	Vendor Management
-------------------	--------------------------

FR-INV-3.1	The system shall maintain a master database of all vendors with their status (Pending, Approved, Blocked).
------------	---

FR-INV-3.2	The system shall prevent the creation of a Purchase Order for any vendor who is not in an 'Approved' status.
------------	---

FR-INV-4.0	Reporting & Analytics
-------------------	----------------------------------

FR-INV-4.1	The system shall generate a daily Food Cost % report by comparing ideal consumption (from recipes) to actual consumption.
------------	--

FR-INV-4.2	The system shall produce a Vendor Performance Report showing on-time delivery, quality acceptance, and price stability.
------------	--

4. Non-Functional Requirements (NFR):

ID	Requirement Statement
-----------	------------------------------

NFR-SEC-01	The system shall be role-based, ensuring users can only view and perform actions permitted by their assigned role.
------------	---

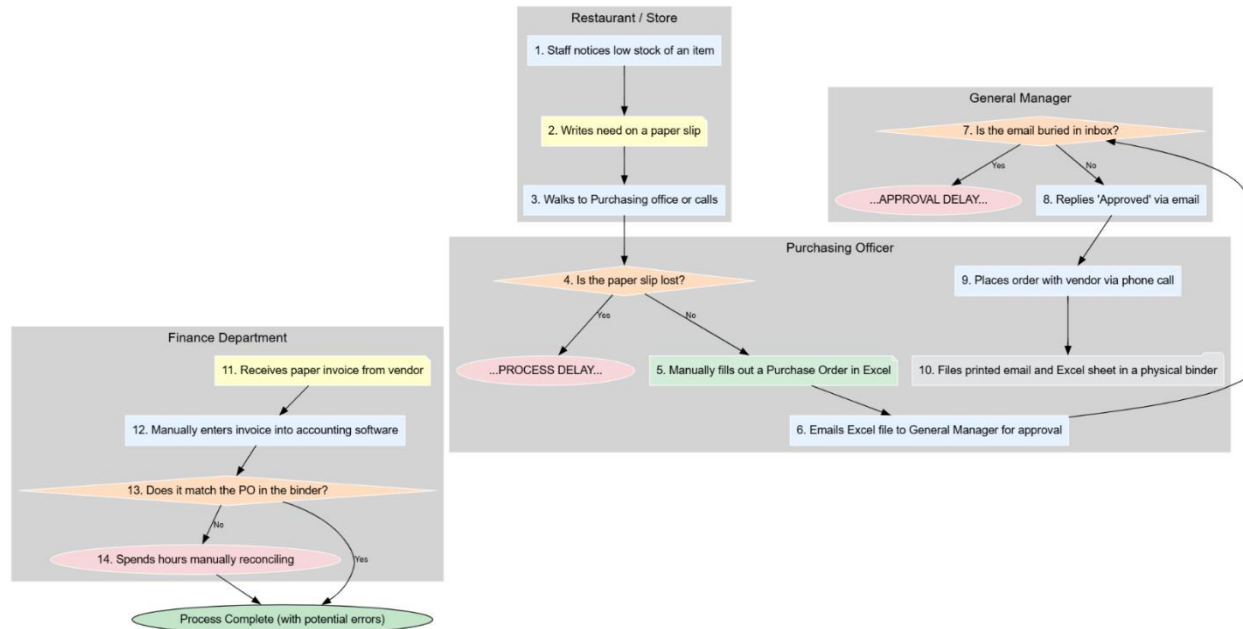

NFR-PER-01	All user-facing screens and transactions shall load in under 5 seconds. Reports may take up to 10 seconds.
------------	---

NFR-AUD-01	All changes to inventory quantity must be logged in an immutable audit trail, capturing the user, timestamp, and transaction type.
------------	---

NFR-USA-01	The system must be accessible via a standard web browser on both desktop and tablet devices.
------------	---
