

Proposal for Inventory Management System (IMS)

SUBMITTED BY: KAMRAN KHAN & AHMED TIRMIZI

DATE: 15-OCT-2025

PROPOSED COST: PKR 450,000

PREPARED FOR: BINORIA EVENTS MANAGEMENT SYSTEM.

1. Introduction

This proposal outlines the design, development, and implementation of a comprehensive Inventory Management System (IMS) tailored to manage purchasing, stock control, departmental requisitions, vendor management, costing, and reporting across the organization.

The system ensures accuracy, transparency, and efficiency in all inventory-related operations while providing complete traceability, approval controls, and automation to minimize human error and optimize resource utilization.

2. Objectives

The primary objectives of the proposed IMS are to:

- Maintain accurate stock levels with intelligent reorder and alert mechanisms.
- Streamline purchase and approval workflows for transparency and compliance.
- Ensure vendor performance management and controlled purchasing.
- Enable real-time departmental requisitions and issue tracking.
- Integrate recipes and costing to monitor consumption and food cost percentages.
- Provide detailed analytics and reporting for informed decision-making.
- Enhance accountability and staff performance monitoring through KPIs.

3. System Features and Functional Modules

Includes modules such as Stock Level Controls, Purchase & Approval Workflow, Vendor & Purchasing Management, Department Requisitions & Issues, Recipes & Costing, Item Location & Storage, Expiry & Warranty Management, Reusable/Saleable Items, Theft & Physical Checks, Staff KPI & Donation Tracking, Reporting, Alerts & Automation, and Roles & Permissions.

4. Technology Stack

- Backend: Microsoft .NET / .NET Core
- Database: Microsoft SQL Server
- Frontend: ASP.NET with Bootstrap (responsive UI)
- Integration: Email and Notification APIs for alerts and approvals.

5. Deliverables

1. Fully functional Inventory Management System (Web-based)
2. User Roles and Permissions Configuration
3. Reports and Dashboards as specified
4. Training and User Manual
5. 3-Month Post-Implementation Support

6. Estimated Timeline

Phase 1 – Requirement Finalization & Design: 2 Weeks

Phase 2 – Development & Internal Testing: 6 Weeks

Phase 3 – UAT & User Training: 2 Weeks

Phase 4 – Go-Live & Support: 2 Weeks

Total Duration: 12 Weeks

7. Project Cost

Inventory Management System (Complete): PKR 400,000

Total Cost (Inclusive of Implementation & Training): PKR 400,000

8. Conclusion

The proposed Inventory Management System will serve as a centralized, secure, and efficient platform for managing all aspects of inventory operations. With automated controls, approval hierarchies, vendor governance, and real-time analytics, the system will significantly reduce manual errors, improve accountability, and support informed decision-making.

We look forward to the opportunity to deliver a solution that enhances your organization's operational efficiency and inventory visibility.
